

# Fundamentals of Semantic Web Development

---

Oshani Seneviratne and Lalana Kagal  
Decentralized Information Group

# Organization

---

- ♦ Instructors: Oshani Seneviratne and Lalana Kagal
- ♦ Coaches: Ian Jacobi, Jim Hollenbach, Matt Cherian, Kenny Luck ...

# Agenda

---

- ♦ **Session I: 40 mins**
  - SW concepts and serializations
- ♦ **Break: 10 mins**
- ♦ **Session II: 40 mins**
  - SW libraries
- ♦ **Break: 10 mins**
- ♦ **Session III: 40 mins**
  - ontology development
- ♦ **Break: 10 mins**
- ♦ **Session IV: 40 hour**
  - commonly used ontologies
  - RDFa

# Session I: Semantic Web Concepts & Serializations

---

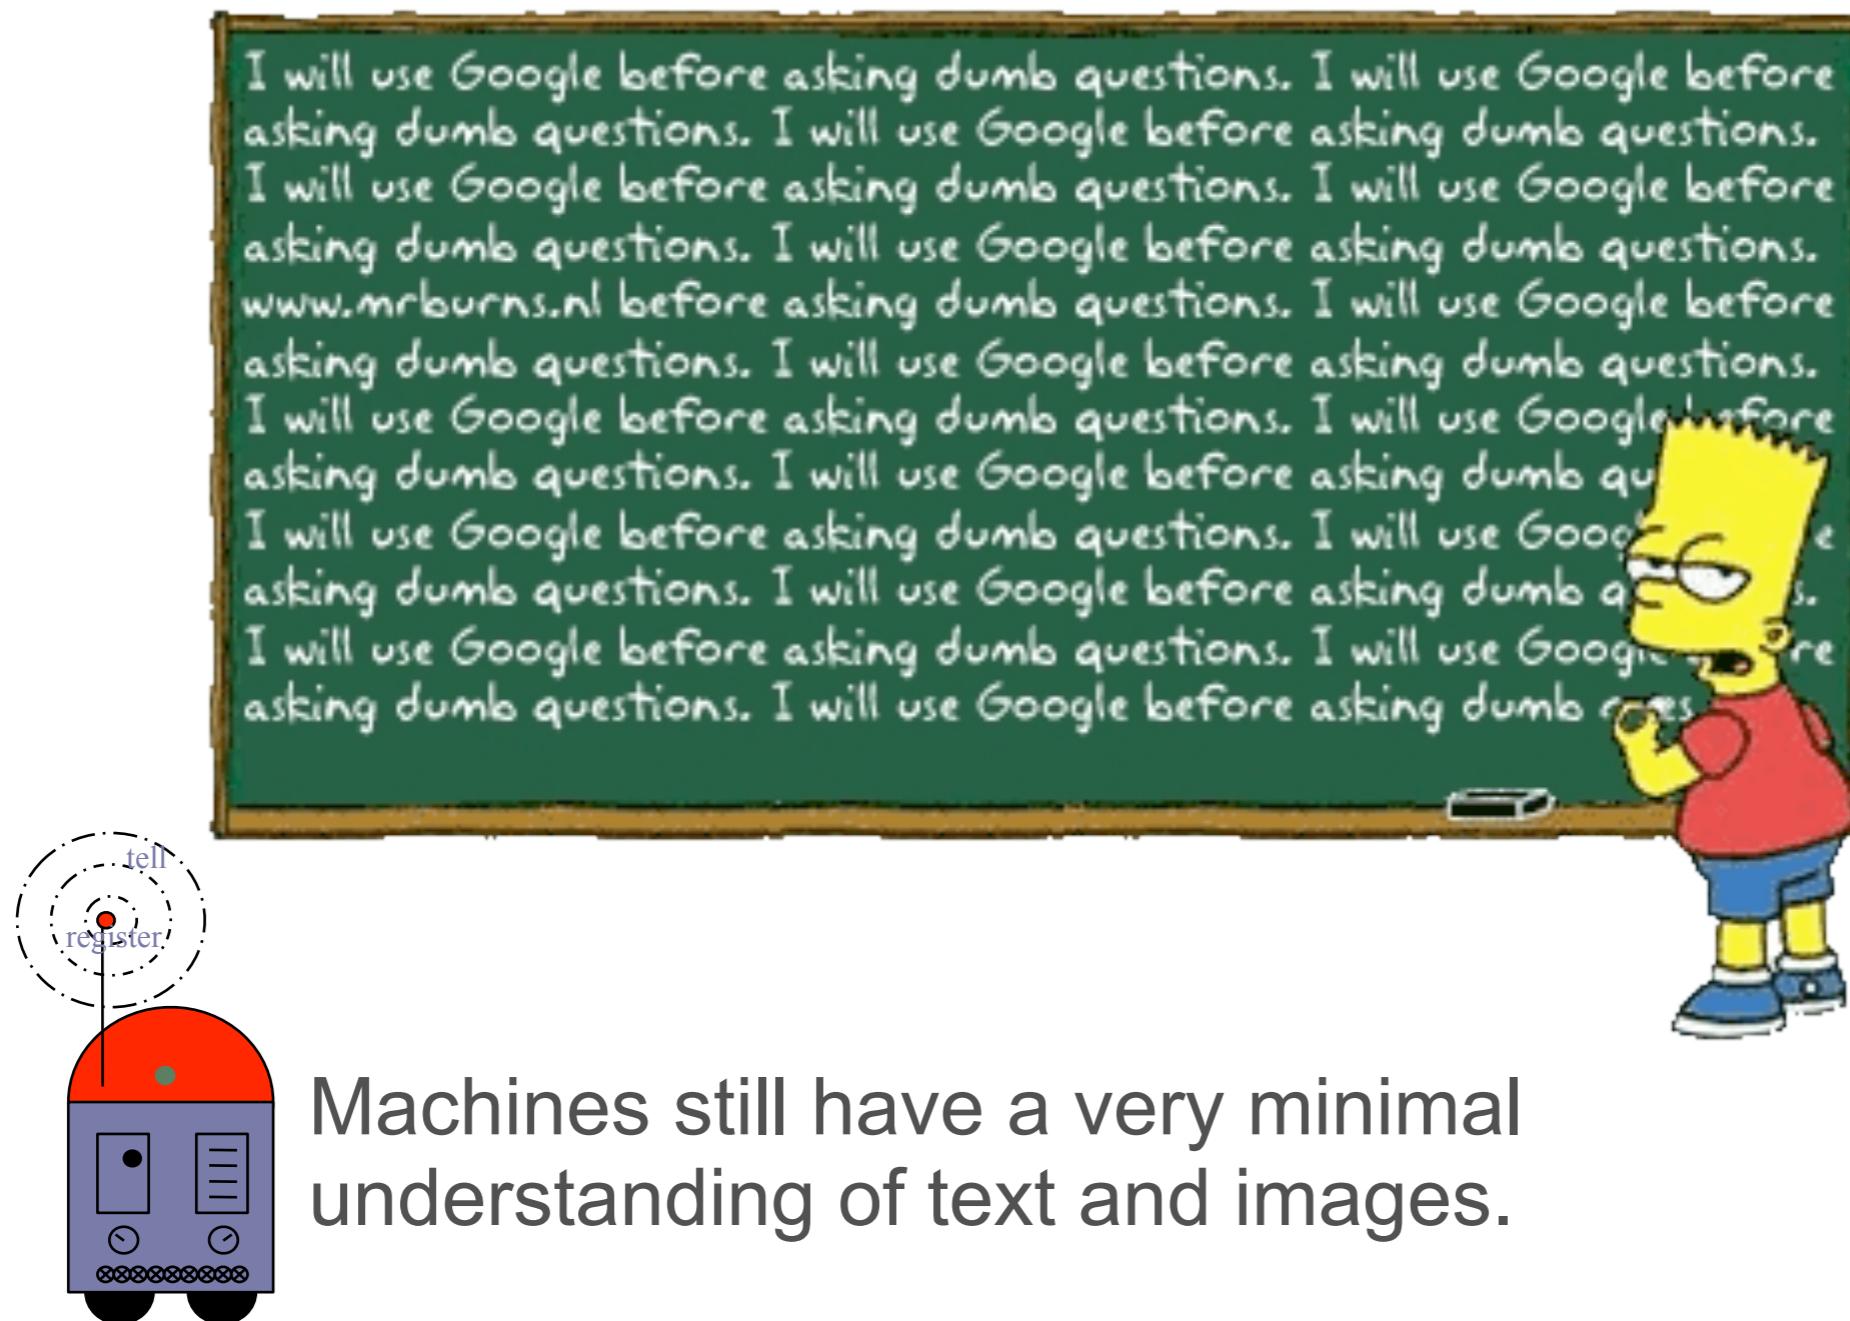

# The Web has made people smarter

---

Slide courtesy of Li Ding

# But what about machines ?

Machines still have a very minimal understanding of text and images.

# Semantic Web: machine-understandable data

- ♦ Natural Language

Alice is a person

as seen by a person

Aliceisa $\nabla \leftrightarrow \uparrow \downarrow$

as seen by a machine

- ♦ XML – represent structures

<person>Alice</person>

as seen by a person

$\langle \uparrow \downarrow \leftrightarrow \rangle \circlearrowleft \times \leftarrow \times \square \text{y} \rangle \langle / \uparrow \downarrow \leftrightarrow \rangle$

as seen by a machine

- ♦ Semantic Web - represent more semantics

- represent structures
- enable common vocabulary
- associate symbols with logic interpretation for inference

Information about Hawaii  
Previous & Future WWW Conferences

On 7-11 May 2002, Honolulu, Hawaii will provide the backdrop for The Eleventh International World Wide Web Conference. This prestigious series of the International World Wide Web Conference Committee (IW3C<sup>2</sup>) attracts participants from around the world, and it provides a public forum for the World Wide Web Consortium (W3C) through the annual W3C track.

The conference is being organized by the International World Wide Web Conference Committee (IW3C<sup>2</sup>), the University of Hawaii and the Pacific Telecommunications Council (PTC).

**FEATURED SPEAKERS (CONFIRMED)**

Tim Berners-Lee, inventor of the World Wide Web and Director of the W3C who now holds the 3Com Founders chair at the Laboratory for Computer Science (LCS) at the Massachusetts Institute of Technology (MIT).  
 Ian Foster, guru of "Grid Computing", associate professor at the University of Chicago and MacArthur Prize Winner.

Richard A. DeMillo, vice president and chief technology officer for Hewlett-Packard Company.

# Inside the Semantic Web (still closer)

---

# Inside the Semantic Web (still closer)

---

- ♦ What does it mean ?
  - Circles - concepts or instances
    - Classes: Person & Primary Care Physician
    - Instances: Alice
  - Arrows - relationships/properties
    - Properties/Links: is a, has role
- ♦ Diagram is read: **Alice** is a **person** and has role **primary care physician**
- ♦ Note: Named links (relationships/properties) is one of the differences between SW and Web

# RDF Data Model

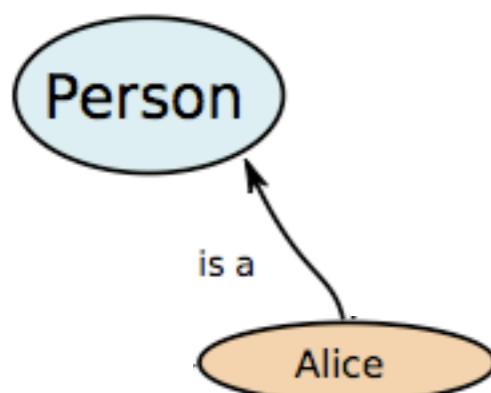

---

- ♦ RDF data is represented as RDF graphs
- ♦ RDF graphs are collections of statements called triples
- ♦ Each triple contains a subject, verb (also called predicate) and object

# RDF Data Model

---

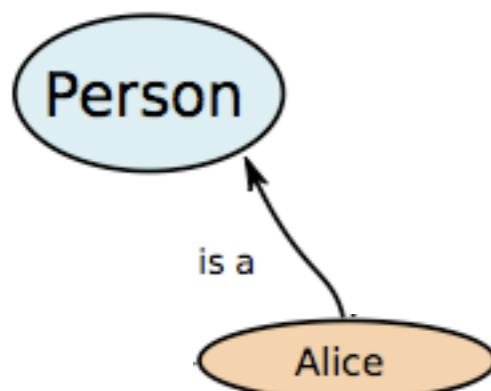

- ◆ RDF data is represented as RDF graphs
- ◆ RDF graphs are collections of statements called triples
- ◆ Each triple contains a subject, verb (also called predicate) and object

# RDF Data Model

---

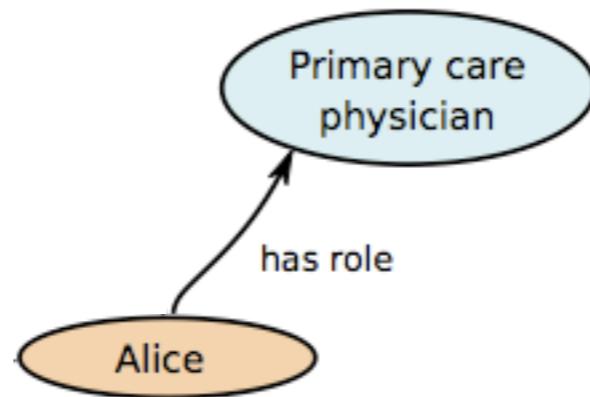

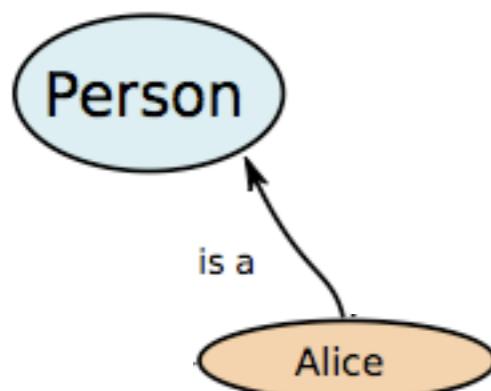

- ◆ RDF data is represented as RDF graphs
- ◆ RDF graphs are collections of statements called triples
- ◆ Each triple contains a subject, verb (also called predicate) and object

subject - Alice  
verb/predicate - is a  
object - Person

# RDF Data Model

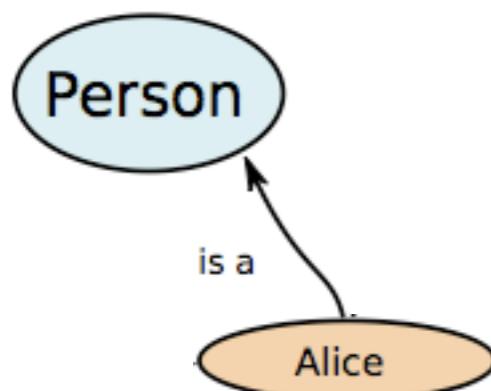

- ◆ RDF data is represented as RDF graphs
- ◆ RDF graphs are collections of statements called triples
- ◆ Each triple contains a subject, verb (also called predicate) and object

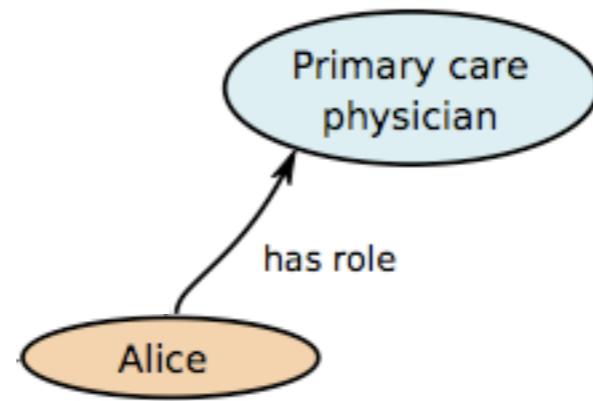

subject - Alice  
verb/predicate - is a  
object - Person

# RDF Data Model

- ◆ RDF data is represented as RDF graphs
- ◆ RDF graphs are collections of statements called triples
- ◆ Each triple contains a subject, verb (also called predicate) and object

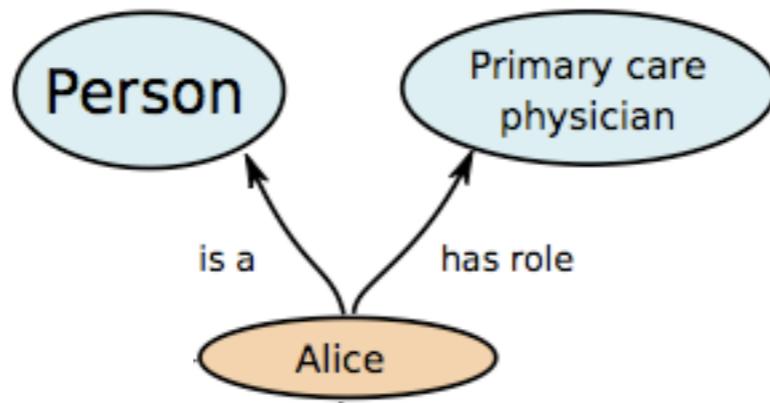

subject - Alice  
verb/predicate - is a  
object - Person

subject - Alice  
verb/predicate - has role  
object - PrimaryCarePhysician

# RDF Data Model

- ♦ Statements/triples describe properties of resources
- ♦ A resource is any object that can be pointed to by a URI:
  - a document, a picture, a paragraph on the Web;
  - a book in the library, a real person
  - isbn://5031-4444-3333
  - Alice, Person, PrimaryCarePhysician
- ♦ Properties themselves are resources and have URIs

# Uniform Resource Identifier (URI)

---

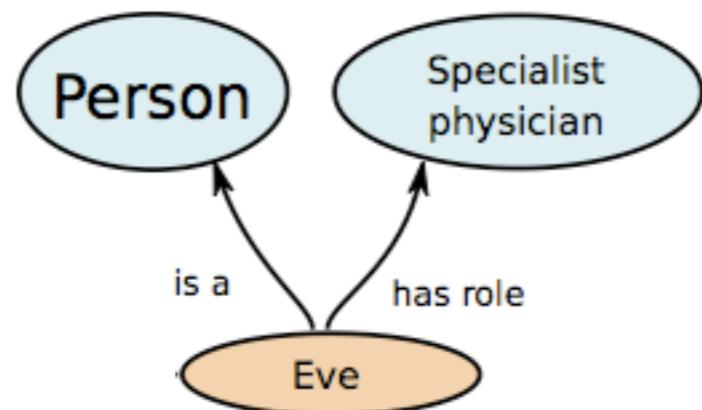

- ♦ "The generic set of all names/addresses that are short strings that refer to resources"
- ♦ URLs (Uniform Resource Locators) are a particular type of URI, used for resources that can be retrieved from the Web (e.g., web pages)
- ♦ In RDF, URIs typically look like “normal” URLs, often with fragment identifiers to point at specific parts of a document:
  - <http://www.somedomain.com/some/path/to/file#fragmentID>
  - <http://example.org/ontology#Person>
  - <http://dig.csail.mit.edu/2010/LinkedData/testdata/example#Person>

# Exercise 1

---

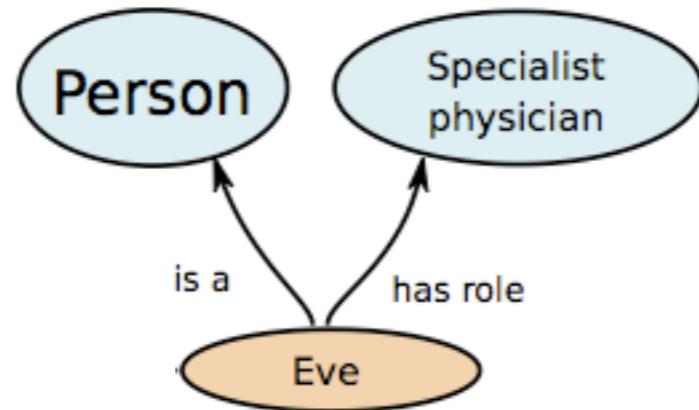

# Exercise 1

---

# Exercise 1

---

- ◆ Properties: is a and has role
- ◆ Concepts: Eve, Person, Specialist Physician
- ◆ Eve is a person and has role Specialist physician

# Exercise 2

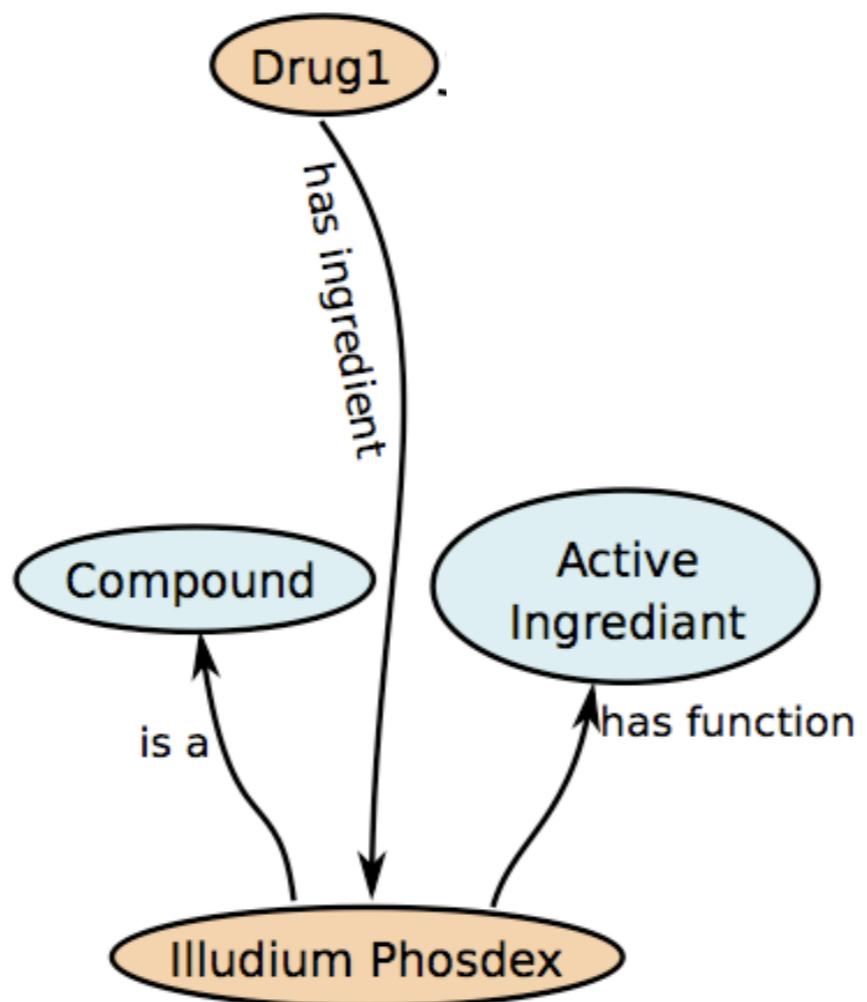

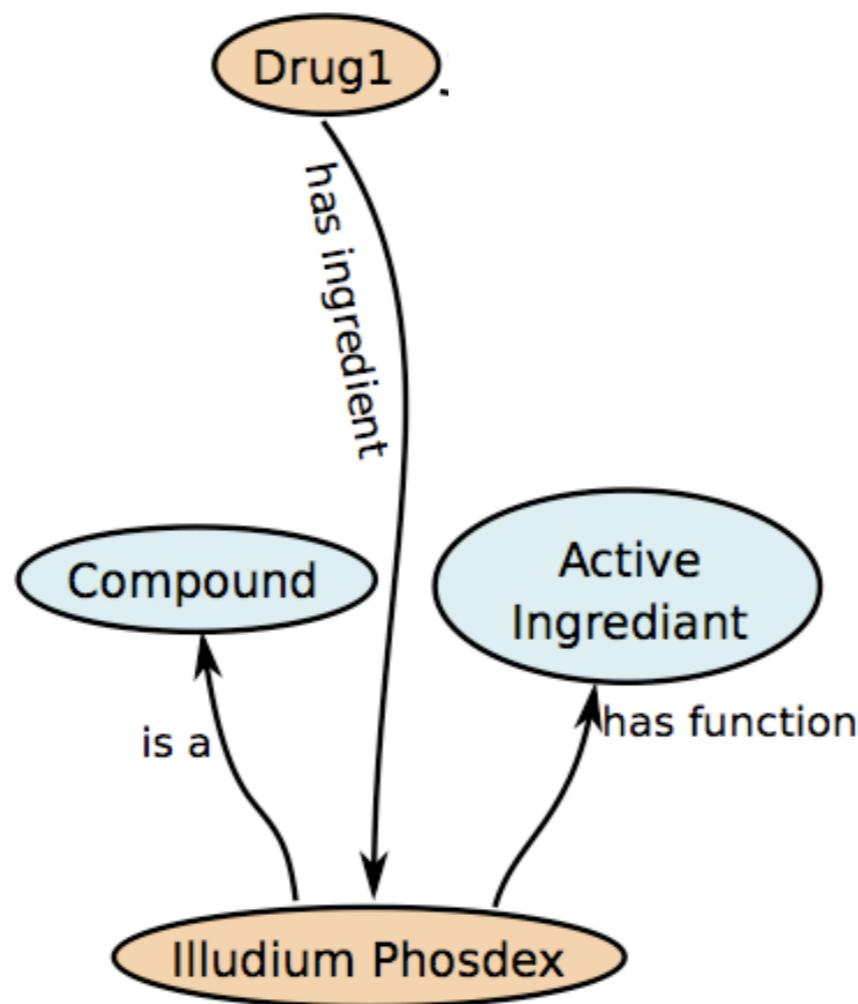

Image courtesy of Eric Prud'hommeaux  
<http://www.w3.org/2009/Talks/1005-jooo-egp/>

# Exercise 2

- ♦ Drug1 has ingredient Illudium Phosdex
- ♦ Illudium Phosdex is a Compound and has function Active Ingredient

Image courtesy of Eric Prud'hommeaux  
<http://www.w3.org/2009/Talks/1005-jooo-egp/>

# Exercise 3

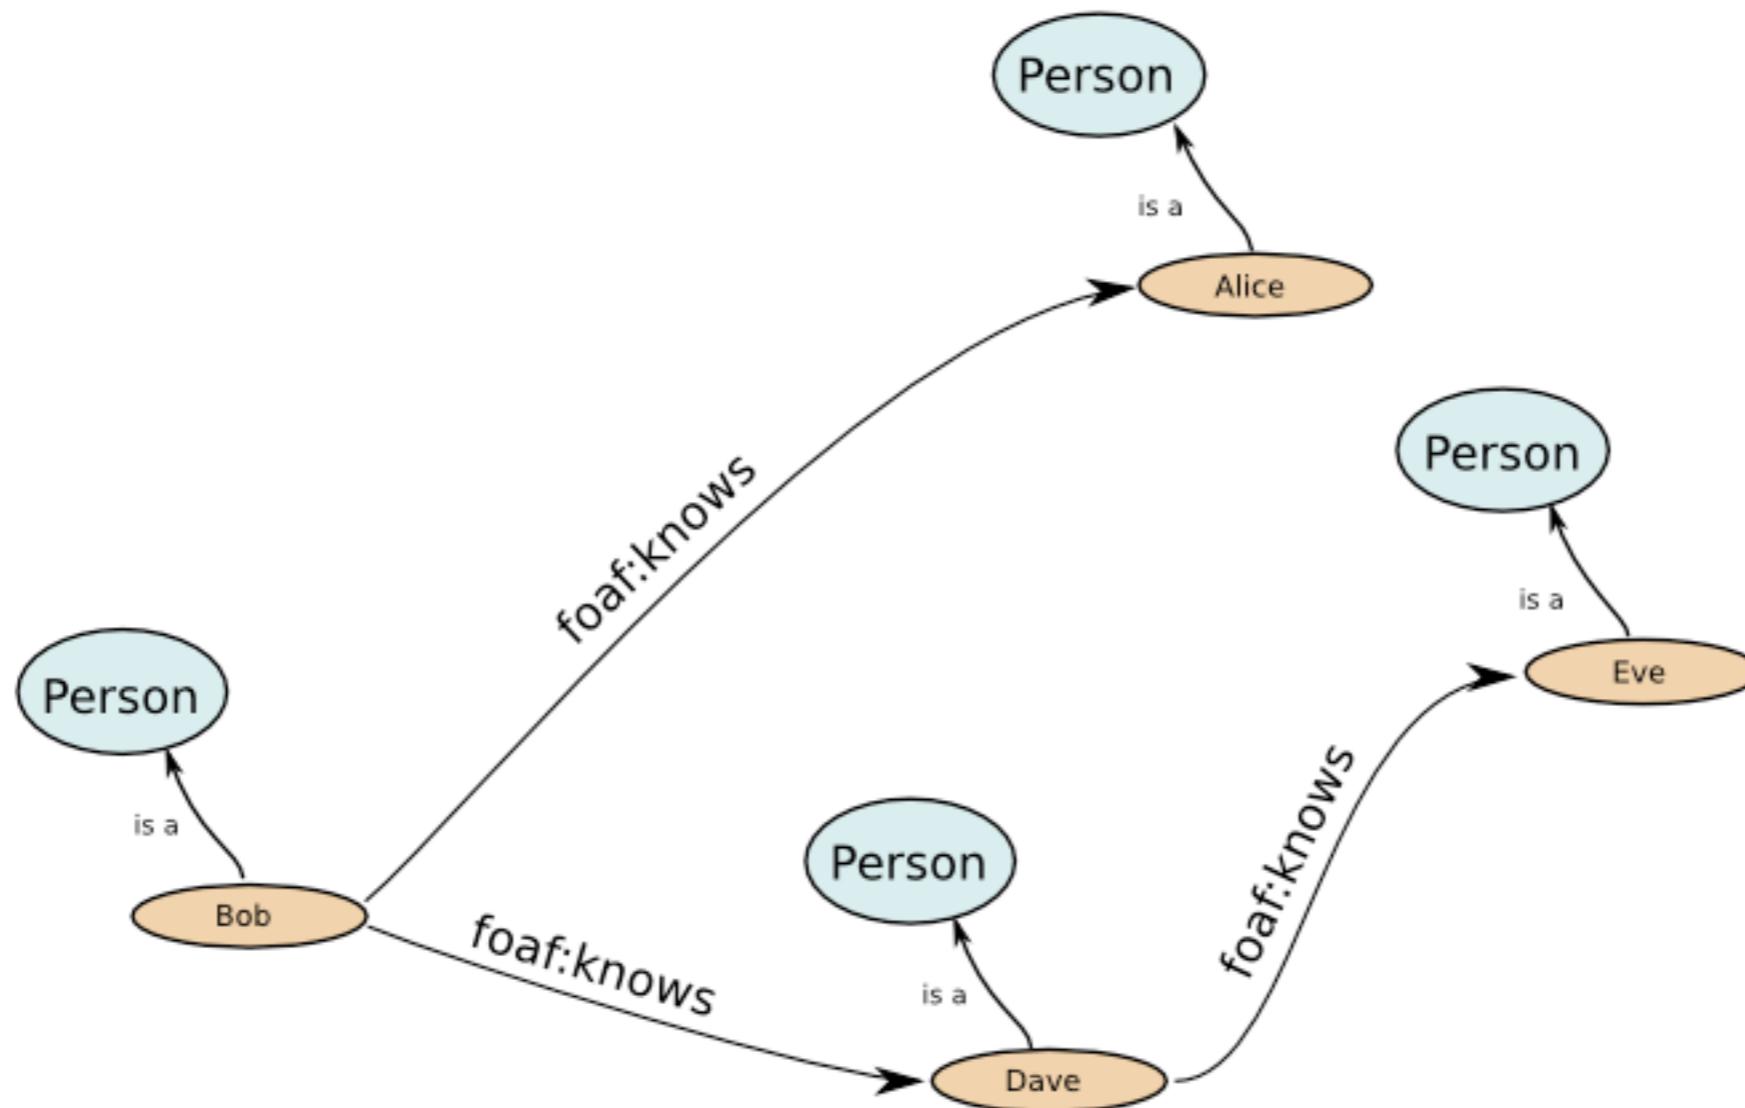

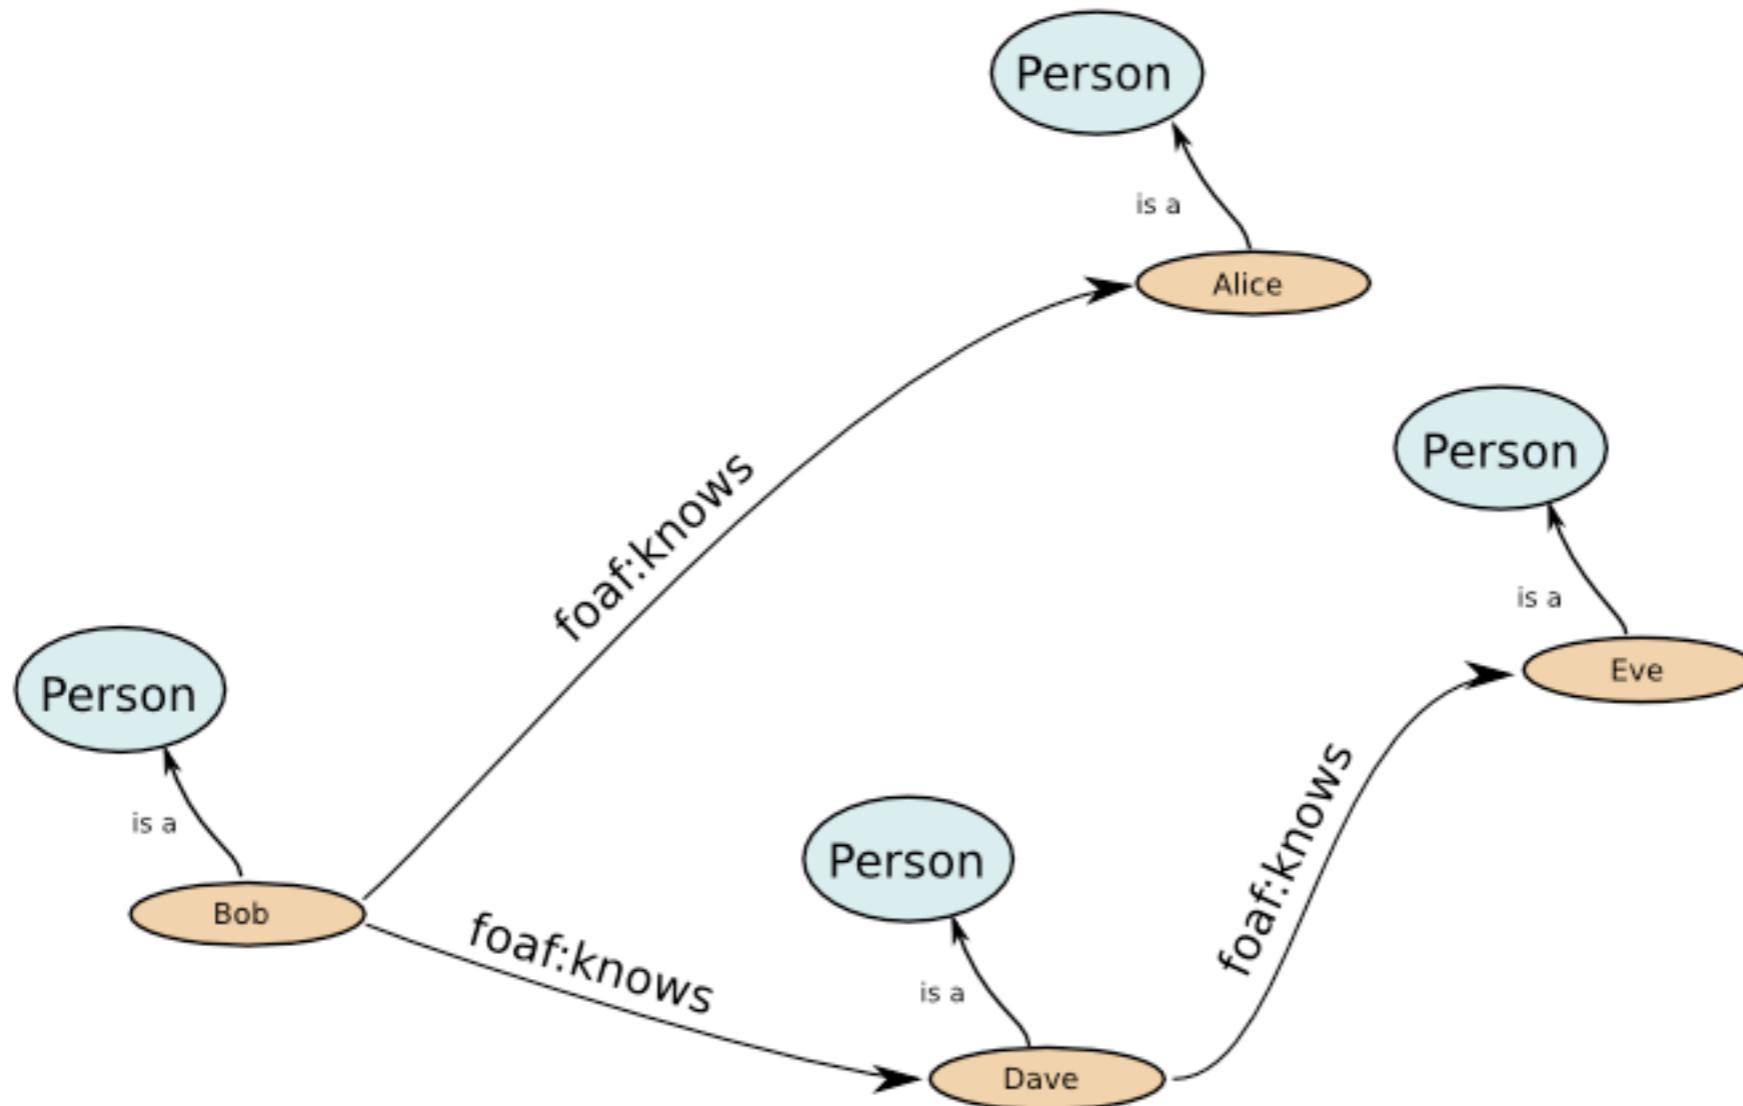

Image courtesy of Eric Prud'hommeaux  
<http://www.w3.org/2009/Talks/1005-jahoo-egp/>

# Exercise 3

- ♦ Concepts: Bob, Dave, Alice, Eve, Person  
Properties: foaf:knows, is a
- ♦ Bob is a person and knows Alice, who is a person, and Dave, who is a person.
- ♦ Dave knows Eve, who is a person

Image courtesy of Eric Prud'hommeaux  
<http://www.w3.org/2009/Talks/1005-jahoo-egp/>

# Serializations

---

- ♦ Some serializations include
  - RDF/XML and RDFa (W3C standard)
  - NTriples
  - Terse RDF Triple Language (Turtle)
  - Notation3 (N3)

# NTriples

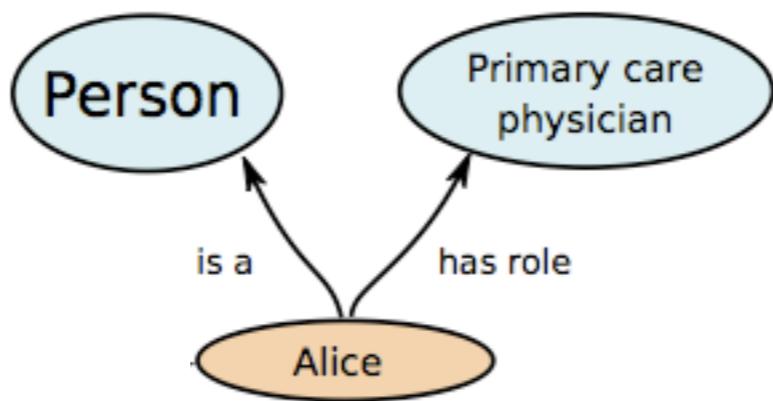

---

- ♦ Plain text format for RDF
- ♦ <http://www.w3.org/2001/sw/RDFCore/ntriples/>

# NTriples

---

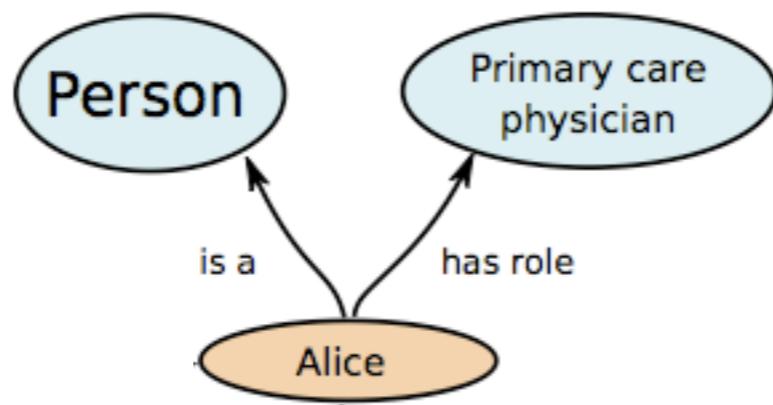

- ♦ Plain text format for RDF
- ♦ <http://www.w3.org/2001/sw/RDFCore/ntriples/>

# NTriples

---

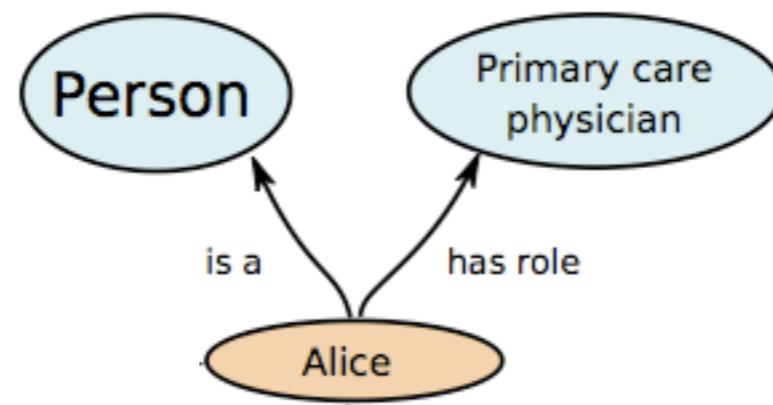

- ♦ Plain text format for RDF
- ♦ <http://www.w3.org/2001/sw/RDFCore/ntriples/>

<<http://dig.csail.mit.edu/2010/LinkedData/testdata/alice#Alice>> <<http://www.w3.org/1999/02/22-rdf-syntax-ns#type>> <<http://dig.csail.mit.edu/2010/LinkedData/testdata/example#Person>>

# NTriples

# Exercise 9: Describe following graph in Turtle & RDF/XML

Assume the following namespaces

Green concepts are defined in <http://dig.csail.mit.edu/2010/LinkedData/testdata/green#>  
 Blue concepts are defined in <http://dig.csail.mit.edu/2010/LinkedData/testdata/blue#>  
 Beige concepts are defined in <http://dig.csail.mit.edu/2010/LinkedData/testdata/beige#>  
 rdf is <http://www.w3.org/1999/02/22-rdf-syntax-ns#>  
 locatedin, participates and other properties are defined in <http://dig.csail.mit.edu/2010/LinkedData/testdata/example#>

# Summary

---

- ♦ RDF data
  - represented by graphs consisting of triples
  - triples consist of <subject> <predicate> <object>
  - can be represented pictorially using circles and arrows diagrams
  - can be represented in text via serializations
    - RDF/XML & RDFa
    - NTriples
    - Turtle
    - N3
